Job Title	Who Can Apply	Job Industry
Environmental Representative for Pipeline Pre-Construction Surveys	Tanzanian Nationals	Oil and Gas

QUALIFICATIONS & EXPERIENCE

- **Education:** Masters Degree or equivalent in an environment, sustainability or science related discipline.
- **Experience:** Minimum of 15 years experience with time spent supporting projects and operations within oil and gas industry.
- **Environmental qualification:** Generalist environmental specialists required; for specific subject matters then topics will need to be taken back to the office for clarification with subject specialists (e.g. botanists etc).

DUTIES AND RESPONSIBILITIES

Preparation Activities

- Understand existing project's ESIA's (and ESBS)
- Understand EACOP Critical Habitat Assessments (CHAs) including GIS mapping
- Have knowledge of the terrain
- Identify additional data needs during the survey so as to inform additional data requirements by environmental specialists post pre-construction survey
- Participate in preparation briefings and inductions prior to mobilization to the field

Pre-Construction Survey Activities

- Participate in pre-construction survey as part of one of the Groups in Tanzania, representing EACOP Environmental position
- Provide environmental context to inform construction contractor on engineering gathering and design/construction methodology especially for the environmentally sensitive areas such as wetlands, watercourses, etc. (e.g. river crossing scheduling concerning env context)
- Flag changes between design/construction methodology versus ESIA (e.g. open cut/HDD)
- Guide video and photos so that correct naming and information is being gathered
- Record relevant information for alternatives analysis (and also ensure information is recorded by CPP)

Post-Survey Activities

- Provide post-survey debriefing to EACOP Environment and Biodiversity Tz team including relevant findings from pre-construction surveys that will need to be incorporated into construction drawings and CPP's construction methodology for the sensitive areas such as wetlands, watercourse, etc..
- Participate in post-survey discussions on construction methodologies and provide evaluation/input from environmental perspective.

PREFERRED QUALIFICATIONS AND COMPETENCIES

- Understand Tanzania regulations requirements for additional activities (e.g. spoil management, borrow pits etc)
- Knowledge of the project pipeline route, familiar with environmental context, and prior involvement in previous ESIA surveys
- Fluent in English (speaking, writing)

Technical competencies:

- Familiarity with IFC standard ESIA's and management plans and systems that support the objectives of the IFC performance standards and EHS guidelines. In depth technical knowledge and experience in application of good international industry practice.
- Experience in practical implementation of IFC standard ESIA requirements on other pipeline projects internationally.
- Proven ability to work independently and meet deadlines

Behavioral competencies

- Ability to work in a multi-cultural business setting and excellent interpersonal and communication skills essential.
